

# CASE STUDY

Liner System for StormTech™ (underground stormwater chambers)

- ▼ **LOCATION:** Winnipeg, Manitoba
- ▼ **PROJECT TYPE:** Product & Supply Installation
- ▼ **PRODUCT USED:** Liner System for underground

## ▼ BACKGROUND:

The Ronald McDonald House charity, was building a new home aimed at better serving local families undergoing medical treatment. Part of this construction project included a StormTech™ underground stormwater retention chamber system. The ground where this system was to be installed needed to be lined with geomembrane liner, however, this portion had not been included in the project schedule and budget.

Titan was contacted for assistance and gladly stepped up by providing the required quantity of geomembrane, and a team of qualified installers to install it, at no cost.

Titan's support helped the local arm of this charity stay within the project budget while helping to prevent delays in progress that otherwise would have been unavoidable.
