

CASE STUDY

MSE Slope - Titan Earth Slope™ Honeycomb System

LOCATION: Ontario, Canada

PROJECT TYPE: Product Supply

PRODUCT USED: Titan Earth Slope™ - Honeycomb System

▼ CHALLENGE:

This project consisted of the replacement of culverts in two locations along Concession Road 10 in the township of Clearview, Ontario. The project covered a 0.6 mile (1km) stretch, requiring the complete removal and reconstruction of the roadway while being restricted by the site's complex slope geometry and adjacent properties ROW.

▼ TITAN SOLUTION:

Titan's Engineering Team, which specializes in Mechanically Stabilized Earth (MSE) and Retained Soil Systems (RSS), worked closely with the contractor Seeley and Arnill Construction and the consulting engineer, RJ Burnside & Associates to help design over 10,764ft² (1000m²) of the 60° Titan Earth Slope™ - Honeycomb System.

▼ ACHIEVEMENT:

The solution provided an economical, eco-friendly, sustainable vegetated slope, which not only pleased the customer but also showcased Titan's expertise as a global geosynthetic expert. The ideal outcome was achieved while maintaining the required 75-year design life.
