

# Pillow Tanks

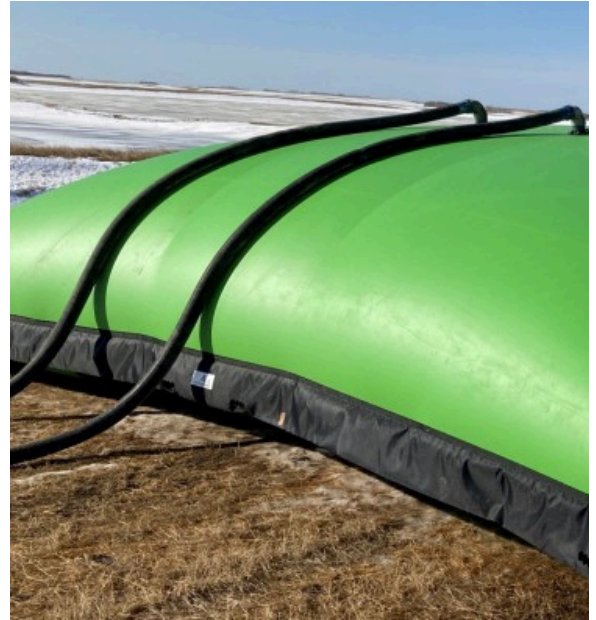

## Emergency Water Storage Solution

### *Proudly Distributed By Titan*

For emergency water storage pillow tanks can be quickly deployed and then filled with water from any available water source. Sealed fill/drain ports (NPTF flange) accommodate pumping water in or out.

Pillow tanks can be filled and drained repeatedly, or function as storage for extended periods of time. The use of high strength materials make our pillow tanks reusable, and then once drained, any minor damage can be easily repaired before they are stored for future use.

Customized capacities up to 200m<sup>3</sup> are available for purchase. 100m<sup>3</sup> units are available for rental.

### Benefits:

- **Reusable** - Manufactured with industrial grade polyester reinforced PVC for multiple deployments.
- **Repairable** - Should any damage occur our industrial coated fabrics are repairable.
- **Durable** - High tenacity polyester base fabric is coated in flexible PVC that is highly resistant to the adverse impact of chemicals, UV and mould and mildew.
- **Mobile** - Transportable and compact.

### Features:

- 30 oz PVC coated material over high tenacity polyesterbase fabric
- 2", 3" or 4" NPT female threaded fittings. (size and qty vary with tank size and capacity)
- 1500 denier 26x27 fp
